- Elufisan Iyiola
- Faruq Olasupo
- Salim Alhassan
- Abubakar Usman
- Favour Igwezeke
- Osumune Chiamaka
- Samuel Olorunsogbon

PROBLEM STATEMENT

The core values of safety, privacy, and transparency drive our problem statement. Our project addresses the critical challenge faced by both healthcare providers and patients who struggle to access clear, immediate, and trustworthy clinical guidance.

In high-stakes medical environments, parsing vast volumes of complex literature to make timely decisions can lead to delays or reliance on unvalidated health advice online. We propose a domain-specific small language model designed to interpret clinical symptoms and accurately synthesise peer-reviewed medical literature. Guided by strict data de-identification and robust fact-checking, our solution ensures patient confidentiality while keeping medical advice firmly grounded in evidence.

Ultimately, this tool aims to empower clinicians with reliable decision support and provide patients with safe, clear guidance, creating a healthier community supported by ethical, trustworthy AI.
